

EMU-100

Remote Management Unit

PRODUCT INFORMATION

EMU-100

The EMU-100 is a product enabling remote management of all A2B Electronics E-series modules over IP. This will enable operators to efficiently manage their head end systems in a very cost and time effective manner, and you can view status and easily change the settings in connected modules from your office.

Features:

- Control all E-series modules over IP
- RJ-45 Ethernet connection
- 20 connections to E-series modules
- Included software for PC
- Very low power consumption

DVB's main transmission standards, DVB-S for Satellite, DVB-C for Cable and DVB-T for terrestrial, dominate the world and are the basis for most of the alternative standards.

design for TV

EMU-100 Remote Management Unit

TECHNICAL SPECIFICATION

(This specification may be subject to change without notice).

IP-connection

Input connector RJ-45 (Ethernet)

Miscellaneous

Supply voltage	AC 230 V (195-245 V)
Power consumption	Typ. 8 W
Size	19" 1 HU (excl. connectors)
Weight	approx. 1.4 kg
Temperature range	0 to +45°C

Serial connection

Connector	RS-232 male
Number of connections	20
Cable connection	Null modem

Accessories

Null modem cables.

Control

PC software included.

Automatic detection of any E-series module.

Easy setup and monitoring of each module.

Pass word protected log in.
